GUIDE TO DIARRHEA IN PIGS

HOW TO MONITOR AND FIND SOLUTIONS

Different types of diarrhea

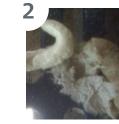

ATTEMPTO			
Post-wean scours			
Bacterial microbial scours	Nutritional scours		
	0		

Diarrhea scoring guide

	Normal	Moderate	Severe
Fecal score	<2	2-2.5	>2.5
% diarrhea	<10%	10-20%	>20%
Duration of diarrhea	<3 days	3-5 days	>5 days
Actions	 Support therapy Acidifiers, eletrolytes Monitor affected animals 	 Isolate individuals Monitor daily Gruel feed Medicate with injectables Seek veterinarian advice for individual medication Support therapy 	 Check environmental factors Check feeds and feeding Check disease status Medicate, if needed Seek veterinarian advice for individual medication Support therapy

Fecal score

Solid, well-formed

Soft, pasty,

Loose, watery

How to monitor and score

Fecal score

- Fecal score is rated in early morning by looking at the fecal consistency in each pen.
- The fecal scoring guide (1 to 4) is used to gauge the general consistency.
- Typically, assessments by 2-3 people can be averaged to represent the pen fecal score.
- Should be done daily until the fecal score normalizes.

% diarrhea

= Total number of pigs with fecal score "4" x 100 Total pigs in the pen

Duration of diarrhea

Total days from weaning where pigs exhibit fecal score "4"

Environmental and management causes

- Poor hygiene and sanitation
- Too cold and drafty
- Wet pens
- Poor biosecurity
- AIAO failure
- High temperature variation during 24-hour period
- Mixing animals of different ages and/or different sources
- Low colostrum intake
- High percentage of first parity sows in
- Low birth and weaning weights

Nutritional causes

- High crude protein in the diet
- High fats and oils
- Feed anti-nutritional factors
- Mycotoxins
- Inappropriate feed ingredients

- Delayed feed/late eaters
- High acid-binding capacity in the diet
- High coliforms in drinking water

FECAL CONSISTENCY

Before weaning

After weaning Note: The same creep feed is fed before

and after weaning.
